

Exception Flow :

Personalized Meal & Diet Subscription Manager Problem Statement #19

This document specifies the exception/error flows for UC-02: Generate Weekly Meal Plan. The flows are based on the existing use-case flow specification and the given requirements.

Use Case UC-02: Generate Weekly Meal Plan

Primary Actor Subscriber

Secondary Actor Dietitian

Exception Flow E-01: Dietary Constraints Cannot Be Satisfied

- 3a. Dietary Constraint Conflict - the system cannot generate a weekly meal plan that satisfies one or more dietary constraints, such as allergies, diabetic limits, or calorie goals.
- 3a1. System displays a message explaining that a valid meal plan could not be generated and identifies the conflicting constraint.
- 3a2. Subscriber is prompted to review and modify the dietary preferences or constraints.
- 3a3. System regenerates the weekly meal plan using the updated information. If the new plan satisfies the constraints, it is sent for review and approval.

Exception Flow E-02: Dietary Profile Information Missing or Invalid

- 2a. Missing/Invalid Dietary Information - the system detects that required dietary profile information is missing or invalid while preparing the weekly meal plan.
- 2a1. System displays a message requesting the missing or corrected dietary information.
- 2a2. Subscriber updates the dietary profile with the required information.
- 2a3. System validates the updated profile and resumes meal-plan generation.

Outcome

- Dietary Constraint Conflict: The meal plan is not finalized until a compliant plan can be generated; after successful correction, it proceeds to review and approval.
- Missing/Invalid Profile: The meal-plan generation is paused until the required dietary information is corrected, after which generation resumes.
